

SmartPager

Distributed Alarm System

Right **here**, right **now**

Bringing the right person at the right time: In bigger wards, missed alarms can cause delayed clinician response, which poses a significant threat to patient safety.

With SmartPager, keep the whole ward in your pocket and never miss risky situations again. A clever alarm management allows you to customize the pathway to determine who receives the notification, leading to clear and timely responses.

Access real-time waveforms and vital signs of multiple patients from both mobile and stationary devices. On a user-friendly interface, the nursing team can easily manage shifts, bed assignments and call for help whenever needed.

- Medical Device Class IIb
- Runs on existing infrastructure and standard platforms
- Browser based administration
- Integration of all Nihon Kohden monitoring and telemetry devices
- Stress relief for patient and nurse
